

Bazaar St So | France

Education

Bazaar St So is a modern co-working space - also known as a “third place” - with 5000m² dedicated to creative industries including workspaces, workshops, meeting rooms, an event space and a bar, all to encourage development of associations, independent traders and traditional companies. It also provides the general public with a space for leisure and discovery thanks to various events - creators’ markets and exhibitions, DJ sets, conferences, forums etc – presented by residents or visiting providers eager to use this ideal venue for their projects.

uniFLOW Online is simple, clear and allows me to free up time for other tasks.

CHEVALIER DE LA COLLOCATION

Customer challenges and requirements

■ When the site opened in 2020, the Bazaar inherited multifunction devices, print management tools via a server, together with their operational processes from the former parent company, to provide self-service printing services to approximately 350 people using the co-working space. In order to access printing services, users had to email the administrator with information required to create an account. The administrator then had to create accounts manually; with frequent changes of user, this was tedious and time-consuming.

The solution

■ Canon proposed that the server hosted software be moved to a cloud solution - uniFLOW Online -which offers the same level of printing services for end users, including secure printing with my print anywhere, mobile printing and scanning to myself. It also simplifies the creation of users; the implementation of self-enrolment is much quicker and does not need any third-party involvement.

Connected devices

- iR ADV 3730 (4x)
- iR ADV C356 (1x)
- iR ADV 525i (1x)

Software solution

- uniFLOW Online
- Secure Print ("My Print Anywhere at anytime")
- Budget Management
- Scan to Cloud

Benefits

■ The implementation of uniFLOW Online allowed Bazaar St So to save time and money on the installation and maintenance of a print server. It simplifies integration and training of new users and really reduces time spent on administration tasks such as updating software, quarterly replenishment of budgets as well as creating users. End users also benefit from simpler printing and scanning processes in their personal cloud spaces e.g. OneDrive or Google Drive.
